

### **Introduction to Phlebotomy Course**

This course is tailored for dental professionals looking to build and refine their skills in phlebotomy within a dental practice environment.

Delivered over two days, the programme combines tutor-led virtual learning (Teams) with in-person practical training, guiding participants up to the point of live blood draws. Each module includes formative assessments to support understanding and track progress throughout the course.

Participants will complete a Practical Experience Portfolio (PEP), recording supervised clinical practice across a range of patients. Ongoing guidance and feedback are provided by a suitably qualified, GDC-registered dental professional acting as a workplace mentor.

The final summative assessment is based on successful completion of the PEP, demonstrating clinical competence and reflective practice. Upon successful evaluation, learners will receive certification and gain 20 hours of CPD.

**Course Fee: £299.00**
